1	Introduction	5
	Acknowledgements	8
2	Background	9
2.1	Notation	9
2.2	The Problem of Complexity	10
2.3	Boolean Functions	11
2.4	Reduced Ordered Binary Decision Diagrams	14
3	The Combinational Permutation Equivalence Problem	17
3.1	Problem Description	18
3.2	Signatures	19
3.2.1	Definition	19
3.2.2	Solution Paradigm	19
3.2.3	Special Signatures	21
3.2.3.1	Satisfy Count Signatures	21
3.2.3.2	Breakup Signatures	25
3.2.3.3	Function Signatures	31
3.3	Experimental Results	33
4	Limits of Using Signatures	39
4.1	The Property of \mathcal{G} -Symmetry	40
4.2	Partial Symmetries	46

	2
4.3 Hierarchical Symmetries	47
4.4 Group Symmetries	53
4.5 Experimental Results	57
4.6 The Variety of \mathcal{G} -Symmetry	59
5 The Latch Correspondence Problem	61
5.1 Problem Description	62
5.2 Signatures	63
5.2.1 Solution Paradigm	63
5.2.2 Input Signatures	64
5.2.3 Latch Output Signatures	65
5.2.3.1 Simple Output Signatures	65
5.2.3.2 Function Signatures for Latch Outputs	66
5.2.3.3 Canonical Order Signature	67
5.2.4 An Example	67
5.3 Experimental Results	70
5.4 Symmetries in Latch Equivalence	72
6 Conclusion	73
A Benchmark Descriptions	76
