Direktor: Prof. Dr. M. Zeitz
Universitätsklinikum Benjamin Franklin, der Freien Universität Berlin

**T cell response to putative antigens and downregulation of
cytokine production by infliximab in ankylosing spondylitis patients**

Inaugural-Dissertation
zur
Erlangung der Doktorwürde
des Fachbereichs
Humanmedizin
der Freien Universität Berlin

Vorgelegt von
Zou, Jianxiang
aus Hunan, VR China

Referent: Prof. Dr. Joachim Sieper

Korreferent: Prof. Dr. F. Hiepe

Gedruckt mit Genehmigung des Fachbereichs Humanmedizin,
der Freien Universität Berlin

Promoviert am: 13.09.2002

Contents

Introduction.....	1
1 Ankylosing spondylitis.....	1
2 Genes and ankylosing spondylitis.....	2
2.1 Association of ankylosing spondylitis with HLA-B27.....	2
2.2 Involvement of other genes.....	4
3 The role of T cells in rheumatic diseases.....	5
4 Role of cytokines in autoimmune arthritis.....	7
5 Cytokine pattern and rheumatoid arthritis.....	9
6 Putative antigens.....	11
6.1 Antigens derived from cartilage.....	11
6.2 heat shock protein (hsp).....	14
6.3 Antigens derived from bacteria.....	14
7 Identification of antigen T cell epitope.....	15
Aims.....	17
Materials and methods.....	19
1 Materials.....	19
1.1 Equipment.....	19
1.2 General reagents.....	20
1.3 Special reagents and buffers.....	21
1.4 Recombinant proteins as antigen.....	22
1.5 Staining antibodies.....	23
2 patients and donors.....	23
3 Methods.....	24
3.1 Preparation of G1 protein.....	24
3.2 Generation of recombinant h-hsp60 and Y-19KD.....	25
3.3 Preparation of Collagen II.....	26
3.4 Preparation of cartilage Gp 39.....	26
3.5 G1 Peptides synthesis.....	27
3.6 Preparation of peptides solution.....	29
3.7 Preparation of PBMC and SFMC.....	29
3.8 Freezing and thawing of PBMC.....	30
3.9 Antigen stimulation and cell culture.....	31

3.10 Cytokine staining and analysis by flow cytometry.....	32
3.11 Peptide-stimulation assay.....	33
3.12 Isolation of G1-specific T cell using IFN γ secretion assay.....	34
3.13 Flow cytometry analysis of G1-specific T cells.....	36
3.14 Culture of G1-specific T cells.....	36
3.15 Restimulation of G1-specific T cells.....	37
3.16 Staining and analysis of G1-specific T cells by flow cytometry.....	37
3.17 Clinical experiment about anti-TNF α treatment (infliximab).....	38
3.18 Separation of cells by Magnetic Activated Cell Sorter and detection of ratio of CD4/CD8 and CD14/CD19 by flow cytometry.....	39
3.19 In vitro stimulation of macrophages with LPS and analysis of cytokines by ELISA.....	40
3.20 Statistical analysis.....	40
Results.....	41
1 Antigen (cartilage-derived)- specific cytokine secretion in ankylosing spondylitis and rheumatoid arthritis compared to healthy controls.....	41
2 Characterization of immunodominant G1- epitopes.....	44
3 T cells response to human hsp60 in patients and healthy controls.....	46
4 T cells response to yersinia-19KD in patients and healthy controls.....	49
5 Relationship of cytokine production by h-hsp60 and Y-19KD.....	51
6 Non-specific cytokine secretion in ankylosing spondylitis and rheumatoid arthritis.....	51
7 Enrichment of G1-specific T cells.....	51
8 Monitoring of cytokine productions of CD4 ⁺ and CD8 ⁺ T cells during infliximab treatment.....	54
9 Effect of infliximab treatment on cytokine product of macrophages.....	60
10 Change of ratio of CD4/CD8 in CD3 ⁺ cells and of CD14/CD19 in CD3 ⁻ cells during infliximab treatment.....	61
Discussion.....	63
Summary.....	75

References.....	77
Abbreviations.....	93
Acknowledgement.....	95
Curriculum vitae.....	96
